

Flymex Jets

We foresee a brilliant future with a growing fleet capable of providing the best service and price to our customers

Servicios Integrales de Aviación S.A. de C.V., doing business as "Flymex", began its operations in 2000 as corporate flight provider, basing operations at its

FBO at the Toluca International Airport, Mexico; first operating third-party aircrafts in private flights, and later with leased aircrafts, due to its highlighted vision placed in the Mexican market which is the second in worldwide importance after the United States.

Although Flymex was established 12 years ago, the technical, administrative and directive personnel had been involved in the aviation industry, holding an experience of about 30 years. A strong commitment of excellence and dedication meant that in the past year, our activities have increased more than double, compared with 2000.

For the time ahead we foresee a brilliant future with a increasing growing fleet, capable to provide the best service and price available to our satisfied customers, not only in Mexico, but worldwide. We keep records of more than 60 strong customers, private and public corporations, as well as government offices, including the award of a United Nations for the World Food Programme public tendered contract, competing against

worldwide providers and other charter operators and flying to several countries in Africa and resulting in an increased customer base and strong name into both the corporate and charter aviation industry. During this time, while our pilots receive regular practical and theory training on site and the engineers, mechanics and ground personnel keep the most highly qualified records and our large charter aircrafts are the only ones authorized to operate from Toluca International Airport and from Mexico City International Airport.

Our charter large aircrafts are the only one authorized to operate, besides Toluca International Airport, also to and from Mexico City International Airport. Additionally, we operate to and from most heliports located in Mexico City metropolitan area.

We now operate with the following fleet:

| | |
|----------------------------|---------------|
| Agusta Helicopter A109E | 6 Passengers |
| Cessna Grand Caravan 208B | 12 Passengers |
| Cessna Caravan (Amphibian) | 10 Passengers |
